About This Item

Work Review

The Polar Express was slow to pull out of the station in its theatrical run, but it gathered steam and continued to draw audiences throughout the 2004 holiday season, defying the typical pattern. It would be inaccurate to call it a "little engine that could," though, as director Robert Zemeckis's adaptation of the Chris Van Allsburg book is pretty much a roaring locomotive thrill ride. Zemeckis, who pushed the visual effects envelope with such films as *Who Framed Roger Rabbit?* and *Forrest Gump*, employs a process called "performance capture," digitally translating the movements of human actors into hyper-realistic animation. What the film lacks in personality, it more than makes up for with breathtakingly beautiful snowscapes. However, it threatens to derail in the time-padding action sequences that would be more at home in a video game, as the Express careers up and down mountains and skids across a frozen lake en route to its rendezvous with St. Nick. Keeping the film on track is Tom Hanks, who provides the human host for several characters, including the young boy (voiced by Daryl Sabara), the conductor, and a mysterious hobo who inexplicably camps on top of the train. Further powering *The Polar Express* are a heart-melting, Oscar-nominated ballad ("Believe"), a rollicking showstopper complete with dancing waiters ("Hot Chocolate"), and the instantly recognizable Jerry Lewis tones of prolific voice-over artist Eddie Deezen as Know-It-All, who has a lot to learn when it comes to Santa Claus.

About This Item

From the Publisher

The Art of The Polar Express celebrates the transformation of Chris Van Allsburg's celebrated children's book *The Polar Express* into a full-length, animated feature film through a fascinating collection of concept art, production storyboards, and computer-generated renderings. Production designer Doug Chiang shares his original, never-before-seen artwork that evolved into the final motion picture. Weaving these pieces together are candid interviews with the star-studded cast and crew, including Robert Zemeckis and his team of filmmaking visionaries, that deliver rare insight into the film as they divulge the secrets behind their creative process.

It's no surprise that NuVa is a Japanese company, because its pneumatic and compact ones we've ever seen. It offers its occupant 360° of vision on the journey up and down, and, thanks to its simple tube-like design, it could fit in a variety of locales, from homes to offices. It only fits one at a time, though, so it wouldn't do so well. Sadly, we don't know much more than how awesome this thing looks.

Check out the below for more images of the NuVa pneumatic elevator, and a video of the elevator in action by
